

X-keys Pendant Switches

- 4, 6, or 8 buttons
- Dust and water resistant enclosure
- Relegendable buttons with clear protective caps and tactile feel switches
- Compatible with X-keys HD15 USB Wire Interface
- Uses standard HD15 connector and compatible cables

Connect the pendant switch to the X-keys XH15 USB Wire Interface with an HD15 extension cable. Please note, some VGA monitor cables do not have all wires connected and so may not work for this application.

A small flat bladed screwdriver or similar item may be used to pry off the clear button cover so that a legend may be applied underneath. Use the included legends or hand write on the blank legend stickers. Reattaching the cover will protect the legend from wear.

All switches are single contact, normally open.
